

8. Attachment E

8.1 Key Questions & Answers from Define, Design & Build Phase

1) What is the maximum length for a Parsed CSR "block of data"?

Response: CSR data up to 1MB will be provided back to the CLEC. This means that in some cases where the CSR data exceeds 1MB, we will be truncating the data and some sections listed in these requirements will not be provided. (Will provide section specific data later)

2) What fields are required/optional/conditional for CLEC input to TAG for Parsed CSR?

Response: General Input Message Structure

CCNA
INQNUM
TXTYP
DT-SENT
TM-SENT
ATN or AN
WTN (repeats optional)

3) Are AN/ATN Interchangeable?

Response: AN and ATN are different. The AN (account number) and the ATN (account telephone number) are both defined as conditional fields. The CLEC must provide either the AN or the ATN as input. They can provide both (the software gives priority to the ATN). It is validation error (see TAGR7.7-PCSR-030) if neither field is entered.

4) On all references to aggregate being (0, N) times, we need to know what N represents in each aggregate. I am sure your systems have built in constraints and that you will not let a particular aggregate repeat 1,000,000 times. Can you share with us what each N is. We need to have our system mirror what you will be sending.

Response: THERE IS NO LIMIT SET ON THE VALUE OF "N".

Further Response: N? should be treated as ?No Fixed Limit.? We use ?N? when there is no defined maximum number of the particular aggregate. While it is unlikely that a particular aggregate would repeat 1,000,000 times, our system has no built in constraint, which stops it

5) I understand from your message that your system will not allow an entire Parsed CSR to exceed 1MB. We need to know what your maximum field length that you send on the following fields, so we can code our system accordingly: IDENTDATA, LISTINGDATA, DIRECTORYDATA, TRAFFICDATA, BILLINGDATA, SEREQUIPDATA, PORTED-OUT-LINE-DATA, REL-ACCT-DATA, BILLING-TRANSFER-DATA, COMP-ACT-DATA, REMAKSDATA

Response: NO MAXIMUM FIELD LENGTHS HAVE BEEN ESTABLISHED.

Further Response: The maximum field length of the above variable length fields has ?no fixed limit.? The only built in constraints the 1MB limitation on the Parsed CSR contract response received by us. Realistically, a truncated Parsed CSR contract probably was truncated in the Service & Equipment (S&E) section where the variable length data element SEREQUIPDATA would approach 1MB. The other variable length data elements presumably would be smaller, but again, there is no fixed limit.

6) The TAG API Guide 7.7.0.1 page 3-22 shows:

/* in */ const char *cc, // Company Code

as a field sent to you on parsed CSR. I do not see Company Code listed in the answers to today's questions. Do we need to send Company Code?

Response: COMPANY CODE IS NOT REQUIRED ON THE QUERY. WE ARE VERIFYING THAT THE API GUIDE WILL BE UPDATED TO REFLECT THIS.

Response 12/12/01: Company code is a required for input

Demonstration of TAG 7.7.0.1 Order & Pre-Order Integration Capability using Parsed CSR
Response (January 2002)

7) There was discussion the call today whether or not TT was in the proper spot in the TAG API to be repeatable. My developers had the same question. Have you been able to determine if it is right or wrong?

Response: TT SHOULD BE A REPEATABLE FIELD, HOWEVER, A DEFECT IN OUR CURRENT CODE IS NOT ALLOWING IT TO REPEAT. THIS WILL BE CORRECTED, HOWEVER, A DATE FOR DELIVERY HAS NOT YET BEEN DETERMINED.

Further Response: TT needs to be changed to allow it to be repeatable. Subject to approvals, it will be in an upcoming maintenance release. It is not defined as a repeatable field in the current release.

8) In the OCT 10 document called CLECDATA.doc Page 4 under the S& E Section Information, the HID tag is shown. It is also shown later in the document under the S & E: WTN section. Should it be both places?

Response: It should be in both places. It's not a mistake. The left-handed HID FIDS are part of the (0,N) list, which applies to the account. Floated HID FIDS associated with a TN are entered in the WTN section (optional for each WTN).

9) Is TXTYP Echoed Back?

Response: The TXTYP field is not echoed back in the Parsed CSR Response. However, it is very easy to tell what the value was by reviewing the response data. If the TXTYP value was an "E," the IDENT section would have been parsed providing the ATN/AN and the BCS field, plus the variable length string for the section. If the TXTYP value was a "T," the IDENT section would not be parsed and only the variable length string for the section would be returned.

10) DTK is not in the shown in repeatable list like DRTI, DTGN etc. Is this correct?

Response: This is correct.

In addition: BST Question Log entry:

11) Question: 091 12/10/01 XchangeLink: In the context of Q # 2 and 3 above, what is required to initiate a query for Parsed CSR?

Response: 12/13/01 & 12/05/01 The ATN and AN are not interchangeable. Each should be entered in the respective field. The User may input the ATN, AN, or AN coupled with WTN to request system display of the parsed CSR.

12) According to the BSR BBR-LO Version 9Q dated September 28, 2001, Section: 9.0 REQTYPE M - Unbundled Network Element Switched Combinations does not contain any usage reference to PORTTYP tag for any ACT or LNA. This means it is not applicable. However we are getting a TAG error requiring PORTTYP?

Response: Regarding the port type field for Reqtype M, there does appear to be a discrepancy in the BBR. This is a required field for activities N, T, V, P and Q. This issue has been referred to our change control process for the document to be updated.

9. Attachment F

9.1 Examples of Screen Prints of CSRQ Request & Response (Phase 1)

The screenshot displays the 'Customer Service Information Query' application window. The title bar reads 'Customer Service Information Query'. Below the title bar, there is a menu bar with 'Query' and 'Help'. A toolbar contains icons for CSIQ, AVQ, SAQ, THAQ, VQ, and LIQ. The main area shows the 'Inquiry No.' as 063C111B3D1E5381. The form is divided into several sections: 'Customer Name' (empty), 'Processing Data' (with tabs for 'Address' and 'Data'), and 'Account Information'. The 'Account Information' section includes fields for 'IP' (BST), 'Company Code' (9999), 'CCNA' (EXC), 'State' (TN), 'Bus/Res' (empty), and 'Requested Data Return' (empty). Below this, there are fields for 'Account Status' (empty), 'Account No.' (empty), 'Account TN' (731-658-5846), and 'LSP Change Status' (empty). The 'Transaction' section includes 'Transaction No.' (empty), 'Transaction Type' (E), 'Transaction Activity' (empty), and 'Customer Indicator' (empty). The 'Working TN' section includes 'Working TN' (empty), 'CSI Ref. No.' (empty), and 'Parsed Data' (empty). The 'Exchange Company Circuit ID' section includes 'Exchange Company Circuit ID' (empty). The 'Customer Code' section includes 'Customer Code' (empty) and 'Service Center' (empty). The 'Agency Authorization' section includes 'Agency Authorization Name' (Michael Barnett) and 'Date' (12-17-2002). There is a checkbox for 'Authorization' which is checked. On the right side, there are buttons for 'Add', 'Remove', and 'Change'. The bottom of the screen shows a taskbar with several open applications: 'Start', 'Network Call', 'VFD 7.1.BST', 'VFD', 'Embarnett Wor', 'Customer', '063C111B3C', '07010112171', 'Microsoft Wor', and '3.27 Ph'.

Demonstration of TAG 7.7.0.1 Order & Pre-Order Integration Capability using Parsed CSR Response (January 2002)

The screenshot displays the VFD 7.1 software interface. The main window shows a 'Customer Name' field with 'Test Account' and a 'Master Tracking No.' field. Below this, there are tabs for 'End User (EU)', 'Resale/Port (RS/PS)', 'Admin (ADMIN)', 'Directory (DIR)', 'Loop/INP (LSNP)', 'Response Information', and 'Miscellaneous Data'. The 'Service Details' tab is active, showing a list of TNs with columns for 'List of TNs', 'Port', and 'Line'. A 'Service Details' dialog box is open, showing the PON number 6001020109183520 and options for EU Address, TN Features, and PIC. The background window also shows a 'Customer Name' field with 'Test Account' and a 'Master Tracking No.' field.
